

## United States Intelligence Community

Case Study

### Mission

The U.S. Department of Defense's (DoD) mission remains constant: to deploy, fight and win our nation's wars by providing ready, prompt, and sustained air, land, sea, cyber, and space dominance across the full spectrum of conflict as part of a joint force.

### Titania Mission Support

Titania supports the United States military's mission in multiple areas with targeted intelligence and training development expertise. Titania provides technical and analytical expertise across the Intelligence Community (IC) (e.g. DIA, major combatant commands, national training centers, U.S. Army Training and Doctrine Command). Our Subject Matter Experts (SMEs) support the associated intelligence disciplines of Measurement and Signal Intelligence (MASINT), Signals Intelligence, (SIGINT), Geospatial Intelligence (GEOINT), and Counter Intelligence/Human Intelligence (CI/HUMINT) and Cyber.

Titania's engineers have provided strategic and technical level assessments and strategies pertaining to offensive and defensive tactics and techniques. Some of these engineers are cyber experts who have regularly delivered lectures on the cybersecurity speaking circuit. Our engineers possess superior capabilities and competencies in the delivery of world-class operational intelligence and training support. Expert intelligence analysts harvest, review and manage information derived from military units supporting real-world missions, and provide research and analysis to support the Army's synthetic training scenarios.

Titania is a critical component involved in designing, developing, and integrating training events and solutions in support of the U.S. Army Intelligence Center of Excellence (USAICoE), the Training & Doctrine Command's (TRADOC) G2, and Army units in garrison. Our SMEs and software engineers are integral in supporting training that develops and sustains Soldier and Leader competence across all training domains. These highly experienced SMEs include professionals with international, joint, and coalition experience and include academia, nationally published cyber experts, analysts, and combat arms experts. Titania takes pride in delivering unmatched, distinctive, and valuable knowledge and skills. Our training cadre provides a flexible application of industry best practices and DoD instructional methodology using government-approved instructional systems, design models, automated tools, and a variety of Learning Management Systems. This approach identifies strengths and weaknesses resulting in clear courses of action for a sustained training outcome that develops and maintains a highly competent, resilient, and adaptive DoD intelligence professional. Titania combines quality instruction with the agile ability to adapt to rapid changes in educational approaches.

## **Titania Mission Support**

Founded in 2012, Titania delivers valued services to the federal government in support of their most critical missions. In 2020, the company was acquired by Swish Data and operates as an independent business subsidiary. Titania professional services include operational intelligence and training, program and data management, test and evaluation, and healthcare information technology. Our services team is comprised of highly qualified retired military and civilian agency personnel that maintain a deep understanding of government systems, programs and processes. Adhering to established standards and best practices, Titania provides identifiable and repeatable IT and personal services that can be seamlessly integrated into any environment.
